

SAHIL ATTAR

sahilattar3011@gmail.com | +91 9404307559 | [LinkedIn](#) | [GitHub](#)

PROFESSIONAL SUMMARY

B.Tech (AI & Data Science) graduate who has built and deployed 2 end-to-end ML web applications (FastAPI + Render), trained on 48,895 and 5,000 records, plus SQL, Power BI and Python analytics projects. Seeking an entry-level Data Scientist role to turn data into deployed, decision-ready solutions.

SKILLS

Programming & SQL: Python (pandas, NumPy, matplotlib, seaborn, scikit-learn), SQL (MySQL: JOINS, GROUP BY, Subqueries, Window Functions)

Machine Learning: Classification, Regression, Feature Engineering, Hyperparameter Tuning (GridSearchCV, RandomizedSearchCV), Model Evaluation (Accuracy, Precision, Recall, F1, R^2 , RMSE)

Deep Learning: CNN, ANN, TensorFlow, Keras

Statistics & EDA: Descriptive Analytics, Correlation, Regression Analysis, Hypothesis Testing, Data Cleaning, Missing Value Treatment

Visualization: Power BI (DAX, KPIs, Dashboards, Slicers), matplotlib, seaborn, MS Excel

Deployment & Tools: FastAPI (REST APIs), Docker, Render, HTML/CSS/JavaScript, Git/GitHub, Jupyter Notebook, VS Code, Google Colab

PROJECTS

Airbnb Room Type Classifier | Python, scikit-learn, FastAPI, HTML/CSS/JS, Render

Live Demo: [airbnb-room-type-classifier-1.onrender.com](#) | **Code:** [GitHub](#)

- Built a multi-class classifier to predict NYC Airbnb room type (Entire home, Private room, Shared room) from price, location, reviews and availability on 48,895 listings.
- Compared 4 models (Logistic Regression, Decision Tree, Random Forest, Gradient Boosting); tuned the best with RandomizedSearchCV to reach 85.5% accuracy and 0.73 macro F1 on held-out data (vs. 65.9% for the baseline).
- Served the full scikit-learn pipeline through a FastAPI /predict endpoint returning class probabilities, and deployed it live on Render with an interactive frontend.

Student Mental Health Prediction (MindMetric AI) | Python, scikit-learn, FastAPI, HTML/CSS/JS, Render

Live Demo: [mindmetric-ai-1.onrender.com](#) | **Code:** [GitHub](#)

- Built a regression model to predict student mental health scores from social media usage, sleep, study, activity and stress data on 5,000 student survey records.
- Improved R^2 from 0.74 (Linear Regression) to 0.87 with a tuned Random Forest (RMSE 0.49) using log-transform, scaling and encoding inside a single sklearn Pipeline.
- Exposed the model via a FastAPI REST API with Pydantic validation and shipped a responsive web UI that returns a score with tailored feedback; deployed on Render.

Employee Attrition Analysis: SQL + Power BI Dashboard | SQL (MySQL), Power BI, Python

- Analysed 1,400+ HR records with SQL (JOINS, GROUP BY, aggregates) and Python to identify key attrition drivers across job role, salary, tenure, department, age group and education.
- Built an interactive Power BI dashboard with DAX attrition KPIs and dynamic slicers, helping HR pinpoint high-risk departments and contributing to a 12% reduction in voluntary attrition.

Retail Sales Performance Analysis | Python, pandas, matplotlib, seaborn, Jupyter Notebook

- Cleaned and analysed retail sales data in Python (pandas, NumPy) to evaluate sales performance across products, categories and time periods.
- Performed exploratory data analysis and built visualizations (matplotlib, seaborn) to surface top-performing segments, trends and actionable business insights.

EDUCATION

B.Tech in Artificial Intelligence and Data Science

June 2026

Nagesh Karajgi Orchid College of Engineering and Technology, Solapur, Maharashtra

CERTIFICATIONS

- Data Science Professional Certificate, Devtown (2024)
- SQL, Great Learning (2023) | Python, Great Learning (2023)
- Data Science, Udemy (in progress)
